LLOYD CHEMICALS (THAILAND) CO.,LTD. (LCT)

MISSION

Our main goal is to deliver excellent training, consultancy services, material supply and provide facilities management solution to the customers. Focused on health, safety, and environmental management, area which we expertise in. As the world is making rapid advancements in the field of industrialization, most of the modern industrial facilities dealing with all kinds of chemicals. Depending upon the toxicity or other properties of the material involved, the most common kinds of problems that might be caused, due to a chemical leak/plant accident might include blast and explosion, Irritation, difficulty in breathing, pollution of air plus water-bodies, impact on local population, vegetation and animals. Irrespective of the amount of sophistication, safety and control measures that a plant can take, the fact is that accidents do happen even in the most advanced factories. We are here to make sure that you are fully prepared for handling of any emergency with excellence in operation and be sustainable business.

Regulatory Compliance and Risk Management

We provide specialist environmental, social, health, safety and risk management consultancy and advisory services for all stages of the business cycle; from planning through to the design, construction, operation and decommissioning stages of a project. LCT promised to deliver high standard services as we combine expertise and experience with an in-depth understanding of the regions regulatory frameworks and cultural sensitivities.

Environmental, Health & Safety (EHS) Compliance Assessment is a critical part of the risk and liability management process associated with assessing, maintaining and improving EHS performance at a particular facility or operation. Clients typically instruct EHS Compliance Audits to assess whether operations and activities at a facility or project site are following host country legal requirements and corporate HSE performance standards, and where non-compliances are revealed, to identify the root causes and recommend the appropriate corrective actions.

LCT has a comprehensive database of Thailand EHS regulations which we typically use to develop an outline EHS Legal register for the operation under assessment based on factors such as the location, size, and nature of the operation. This then allows us to send a customized pre-audit document preparation list to the facility management in order to enable them to assemble the appropriate EHS related documentation for the auditors review during the onsite audit. LCT can conduct and report EHS compliance audits using our audit protocols and reporting templates, or the clients own corporate auditing tools and materials.

A typical onsite audit comprises of a facility walk through, a review of the requested EHS documentation, interviews with key personnel, further targeted inspections of selected activities and a close out and wrap-up briefing to facility and corporate management detailing the main audit findings. Our detailed reports identify the EHS non-compliances and root causes, which are ranked by significance based on risk assessment techniques to derive an overall Risk Factor for each finding. For each finding our reports include recommendations with respect to the corrective actions, associated budgetary allocations and timelines for implementation based on the assigned risk factor.

Our team of environmental, health and safety compliance assurance professionals provide a broad range of services including onsite EHS audits to national and best practice benchmarks, the preparation of bespoke EHS Legal Registers for planned and existing operations (construction and operational phase) and the provision of EHS regulatory update services.
